The SAS Shortcut created for HW01 should have –SASINITIALFOLDER c:\workshop\hw01.

There are 16 examples in this workshop, each one in a separate file.

The data for the workshop can be found in the c:\workshop\HW01 directory in a file named PROCREP.DAT.

The files named EX01.SAS through EX16.SAS implying that they are to be run sequentially. However, EX01 is the only one that must be run first, in that it creates the working data set SURVEY which is used in all subsequent program examples. Should you have to restart, simply re-run the EX01.SAS program first before getting back to the example the rest of the group is on.

The examples are set up to all be in the same folder as the data, currently C:\WORKSHOP\HW01\. If you put them in a different folder, change the INFILE statement in EX01.SAS accordingly.
