

Enforcing Standards in an Organization: A Practical 6 Step-Approach

Dany Guerendo Christian:
CEO and Founder
STATProg Inc.

Dany Guerendo Christian, M.A, is an accomplished Data Analyst (20+ years) and Programmer. She holds a Master's in Mathematics from Indiana University and a Graduate Certificate in Applied Statistics from Texas A&M. She is a certified project management professional, PMP®. She programs in SAS, R, and Python. She has extensive leadership experience in clinical data standards (CDISC) for regulatory submission.

Dr. Priscilla Gathoni:
CEO and Founder
Wakanyi Enterprises Inc.

Dr. Priscilla Gathoni, DM, MSc, MBA, GHMGC, is an executive leadership coach, facilitator, author, inspirational and motivational speaker, educator, and voice artist. Dr. Gathoni has delivered inspirational and unforgettable talks at global conferences and community events. As a coach, Dr. Gathoni is a charismatic and energetic coach who uses a non-judgmental approach and proven coaching tools, techniques, and frameworks to enable clients to advance in their thinking, ideas, goals, and aspirations to unlock their true potential. As an educator, Dr. Gathoni is a data science professor at the University of Maryland Global Campus. Dr. Gathoni is the **ACADEMIC CHAIR** for the **PHARMASUG 2024 CONFERENCE**.

What this presentation is about A 6-Step Approach

Do Standards exist in your organization? Do your standards comply with CDISC standards and FDA Guidance?

What is the importance of standards (Efficiency, Automation)?

Are there repercussions for not adhering to standards?

Is there a gatekeeper for capturing standards adherence metrics?

Macro adherence utility: for checking the standards macro in project folder

So what? We have standards, tools, and utilities. How effective are they?

Standards in Your Organization

Challenge of having standards in place and consistency of using standards

- Estimates available show that large portions of organizations supporting clinical research use CDISC for database standardization
- (<https://www.fda.gov/ForIndustry/FDABasicsforIndustry>)

FDA Electronic Submission Gateway (ESG)

Standards Access and Use

Proposal: A dedicated multi-functional Standards Group to support the implementation of clinical data Standards and individual study teams.

Organizations should maintain a clear location of company standards:

- OneDrive
- SharePoint Online
- MS Teams

A “**Librarian**” : in charge of maintaining all standards

- CDISC implementation guides
- Controlled Terminology
- Regulatory Guidance
- Other documents

Importance of Standards

▶ The reduction of time spent building the analysis databases

• **Creating specifications**

• Automate when values are defined the same way

▶ Re-use programs (efficiencies)

• **Time spent on reviewing the results from the analysis!**

• Create tools that allow standards to be used consistently across TAs

▶ Less resource utilization

• Money-saving venture in the short and long term

Importance of Standards

1. Building SDTM/ADaM database
2. Programming TLFs
3. Creating define documents
4. cSDRG/ADRG
5. Submission Package (eCRT Packages)

- Building DB
- Programming
- Define
- cSDRG/ADRG
- Submission Package

Timelines for your study

Schedule of Events in R&D

Enforcing Standards

- ▶ The goal of “enforcement” is not to police project teams
- ▶ Putting in place a few creative options to encourage adherence to standards

1. Provide metrics on adherence in e-brief or newsletter, or during town hall meeting
2. Possibility for management to tie team and individual performance with the adherence metrics
3. Provide incentives for programmers to continue complying with standards adherence
4. Set up clinics or training programs to show the value of using standards.

Enforcing Standards – “Gatekeeper”

- Who is the person best suited to be the gatekeeper for standards adherence metrics?
- The gatekeeper bridges the gap between data acquisition and practical implementation of the standards
- Programming Managers and Project Leads should serve as the standards gatekeepers
- Create standards subject matter experts (SMEs) within a team or project that serve as gatekeepers
- Add gatekeeping responsibilities to the therapeutic area standards team and corporate standards team

Enforcing Standards – Examples

For example:

1. This team should be able to run utilities to check adherence within studies and projects
2. Monthly report should be generated and shared across the relevant therapeutic areas and project groups

Standards Compliance

In-house developed tools are a great way to assess standards compliance, advantages include:

1. They are usually built to run within your programming platform
2. They can be created with the input of project teams understanding exactly what they need to improve efficiency

Examples of such tools include:

1. Creating utilities that checks within a study folder the standard macros used and generates the compliance report
2. Creating utilities that checks the usage of common variables within the standard domains

Utility Macro

- ▶ We present a generic utility that can be adopted to complement your organization's platform.
- ▶ Example utility macro downloadable:
<https://statproginc.com/sas-macro-code/>

So What?

- ▶ We have standards, tools, and utilities. How effective are they?
- ▶ Two approaches are proposed:
 - **Internal validity:**
 - Using the Likert Scale Questionnaire Survey
 - **Measuring reliability:**
 - The idea here is to show that if a standard is reliable, it is more likely to be effective.

Using the Likert Scale Method

A Likert Scale is a type of rating scale used to measure attitudes or opinions. With this scale, respondents are asked to rate items on a level of agreement

Strongly agree=5
Agree=4
Neutral=3
Disagree=2
Strongly disagree=1

Agreement: Strongly agree to strongly disagree.
Frequency: Often to never.
Quality: Very good to very bad.
Likelihood: Definitely to never.
Importance: Very important to unimportant.

Four factors should be considered when developing a Likert scale for your tool, utility, or standard:

1. Define the Focus e.g., “Standards Effectiveness” or “This Tool”
2. Generate the Likert Scale items
3. Rate the Likert Scale items
4. Administer your Likert Scale test

Measuring Reliability

The reliability of a standard, system, or tool is a measure of its ability to provide a failure-free operation.

Measuring the failure rate of a standard or tool

Reliability which can be hard to measure

- comparison of two studies under observation, one that uses the tool, and one that does not.
- measure the dependability by comparing a newer version with an older version
- Can be defined as the probability of failure-free software operation

Decision Guide Matrix – Outsourced Studies

“They Mess up Each Time!”

Standards	Missing timelines		Simple systemic errors		High complexity of trial/data/endpoints	
	Incomplete delivery		Honest misinterpretation of requirements (SAP/Mockups)		Lack of sponsor oversight/availability	
Project Facts	Poor communication		Lack of consistency		Shift in requirements	
	Blame-game		Willingness to make corrections and achieve quality		Unrealistic timelines	
	Failure to fix findings		Has qualified resources			
Indifference to escalation						
Project time sensitivity	High	Low	High	Low	High	Low
Decision guide	Fire the vendor	Fire the vendor	Keep the vendor	Keep the vendor	Bring it in house	Keep the vendor
Next Steps	Bring it in house	Outsource again or Bring it in house	Increase sponsor involvement		Tighten up scope. Gain control over details	Increase sponsor involvement

Table Source: Raghunathan, Dilip. PharmaSUG 2019: Avoiding Disaster: Manager’s guide on how to rescue a failing outsourced project

Celebrate Your Success in Standards Adherence

- ▶ Key ingredient of success is positive morale – cultivate it!
- ▶ Team with boots on the ground need to know they are going in the right direction
- ▶ Celebrate all small wins!
