At Nvolve, we believe that every woman should have an equal opportunity to succeed in Science, Technology, Engineering and Mathematics (STEM) fields. We have implemented practices that clarify career paths, develop technical skills, and facilitate career advancement - aimed at reducing female STEM attrition at key junctures of education, hiring, and professional development. We aim to break down barriers, build a supportive community, and provide access to valuable resources to help female college students reach their full potential. Nvolve Inc. is a 501(c)(3) non-profit organization dedicated to increasing the participation of women in STEM fields.

Nvolve has built an integrated multi-year pre-professional development model to support college women majoring in STEM fields.
A Better World STEMs From Her.

Founded in 2020, Nvolve is a 501(c)(3) non-profit organization, dedicated to increasing the participation of college women in technology, engineering, life sciences, and health careers. Our selective community of fully-volunteer leadership, mentors, and coaches empowers college women to overcome gender, racial and socioeconomic barriers to STEM fields and professional success. In collaboration with academic and industry partners, Nvolve uses unique approaches to mentoring, professional skill-building, and experiential learning to prepare college women for successful STEM careers. Our program engages STEM students throughout the academic year – providing them with a window into the real-world ways of working.
